The rapidly expanding pet industry has a variety of careers for the animal loving enthusiast. This program offers basic and advanced skills in areas such as nutrition, animal husbandry, anatomy and physiology of animals and clinical skills such as handling and restraint of large and small species, clinical laboratory and medical terminology.

Traditional instruction and hands on learning enhances the students learning experience. Upon completion of the program, students can continue on to a career or choose to enroll in post-secondary education to earn a degree in an animal related field.
