CVES New CTE Center Construction Update

CTE Center Construction Project Update!

We're back with the second installment of our construction update series for the new CVES Career and Technical Education (CTE) Center in Plattsburgh. Since our last update, significant progress has been made on-site, and we're excited to share the latest developments with you.

Site work has continued steadily, creating a strong and stable foundation that sets the stage for vertical construction. One of the most visible milestones so far is the placement of the first prefabricated concrete walls—marking a major step forward in the building's transformation from blueprints to reality.

In addition to work on the main structure, foundation work has now begun on the secondary structure. This progress reflects the coordinated efforts of the construction team to ensure all aspects of the facility are moving forward efficiently and on schedule.

Check out the latest photos to see the progress for yourself. It's rewarding to watch this important project take shape, and we'll continue to keep you informed as each new phase unfolds. Stay tuned for more updates as we bring this state-of-the-art CTE Center to life!
